## FOREWORD

This annual report is compiled by the Washington State Agricultural Stabilization and Conservation Service (ASCS) Office to present a summary of our county ASCS office operations in 1970.

ASC committees are responsible for the administration of programs which directly or indirectly effect the welfare of each individual in the nation.

Farm programs are designed to protect farm income and provide adequate supplies of food to consumers at reasonable prices. Other objectives of the farm program are to continue to protect our environment by conserving soil, water-resources, and preservation of forests and wildlife. The Agricultural Act of 1970, with its new Rural Environmental Assistance Program, will put more emphasis on this part of our program.

Our appreciation is extended to county and community ASC committee-men, county office personnel, and representatives of other agencies and farm organizations who greatly contributed to the success of our farm programs in 1970.

### Washington State ASC Committee

## PRICE SUPPORT PROGRAM

Price support operations are conducted in the name of and financed by Commodity Credit Corporation. Any price support program must be approved by the Board of Directors of CCC and the Secretary of Agriculture.

Price support operations in the field involving direct dealings with farmers are a responsibility of State and County ASC Committees. County office personnel assist the farmer in the preparation of price support documents, check eligibility for price support, and adequacy of farm storage facilities.

Support is achieved through loans, purchases, and payments for some commodities at announced levels. For most commodities, loans are made directly to producers on the unprocessed commodity through ASCS county offices. Smaller amounts of many are purchased from producers.

Price-support loans to producers are "nonrecourse." If market prices rise above support prices, producers can pay off their loans and market their commodity. If market prices fail to rise above support prices, producers can deliver the commodity to CCC, with appropriate adjustments for quality and quantity, and discharge their obligation in full.

Support loans and purchases give farmers a ready means of promoting more orderly marketing, particularly in period when bountiful harvest supplies threaten to push prices of farm commodities down to unfair levels. When supplies are excessive, stocks are built up in supporting farm commodity prices. These stocks are in turn released into the market as needed to stabilize supplies and prices.

Eligibility for price-support loans, purchases and payments, and for wheat marketing certificates is conditioned on participation in allotment or commodity acreage diversion programs for that particular crop.

The following tables indicate by commodity the number and type of loan, quantity placed under loan, and the number and quantity of farm-stored and warehouse-stored reseal and extended loans.

##

TYPICAL EASTERN WASHINGTON COUNTRY ELEVATOR FOR STORING BULK SMALL GRAINS

This 400,000 bushel capacity elevator is located in Dayton, Washington.

Country elevators of this type in Eastern Washington have a capacity of over 100 Million bushels. They are licensed under State or Federal Warehouse Laws and are approved under the Uniform Grain Storage Agreement with CCC.

Farmers producing small grains eligible for price support may obtain warehouse loans stored in such elevators at their County ASCS Office.

## FARM STORAGE AND DRYING EQUIPMENT LOANS

A substantial part of the grain placed under price support loan each year is held in farm storage on the farms where it is produced. To encourage increased farm storage, CCC makes loans to farmers to finance new farm storage facilities for the storage of price-supported commodities. The program was inaugurated in June 1949.

In this State since 1955, loans for construction of 1,007 farm storage facilities, with a capacity of 8,671,680 bushels, have been approved by county committees. Loans made under this program are administered by County ASC Committees.

Disbursements are made by CCC Sight Drafts, and all repayments are made to the County ASCS Office. A producer may borrow up to 85 percent of the cost of the new storage bins. Repayment of the loans are made in four equal installments, with the first installment payable 12 months after disbursement. Interest is computed on the unpaid balance as follows: Loans which were in effect prior to May 30, 1969 have an annual percentage rate of 4.08. Loans effective May 30, 1969 to April 1, 1970 -- 6 percent; and, effective April 1, 1970 -- 7.5 percent.

All facility loans made in this State have been in Eastern Washington counties.

The following tables indicate the activity in the 1970 Farm Storage Facility Loan Program.

##

FARM STORED SMALL GRAINS UNDER PRICE SUPPORT LOAN

YAKIMA COUNTY

Bins were constructed with help of Farm Storage Facility Loan.

Producers of small grains in Eastern Washington have over 30 Million bushels of farm storage. Since the inception of the Farm Storage Facility Loan Program in 1949, facility loans for storing over 10 Million bushels of price-supported commodities have been approved.

Facility loans made under this program are administered by ASC County Committees.

## WOOL INCENTIVE PROGRAM

The Wool Program, administered by the ASCS, is an incentive program to increase production. It is authorized by the National Wool Act of 1954, which directs that wool production at a yearly level of 300,000,000 pounds should be encouraged as a measure for our national activity and in promotion of the general economic welfare.

To encourage this production a support level of 69 cents per pound has been established for the 1969 marketing year. The net price received by wool producers throughout the Nation for the wool marketing year is determined. The rate of incentive payment then is computed, which increases the national net price received by producers to the 69 cents per pound support level. Payments are made to wool growers by applying this percentage to the net price received for the shorn wool marketed by the individual producer. The percentage rate of payment for 1969 is 65.1%.

The rate of unshorn lamb payment is set in relation to the wool incentive payment. The rate of payment for 1969 unshorn lambs is \$1.09 per hundredweight of unshorn lambs sold.

The following tables indicate the 1969 Wool Program in Washington State for Shorn Wool and Unshorn Lambs.

## SUGAR BEET PROGRAM

The United States Sugar Program has a three-fold purpose:

- (1) To protect the welfare of the U. S. sugar industry.
- (2) To provide U. S. consumers with ample sugar supplies at reasonable prices.
- (3) To promote and strengthen the export trade of the United States.

To encourage the continued domestic production of sugar in this country, conditional payments are made to producers in return for their compliance with the production adjustment and other provisions of the program.

To be eligible for sugar payments, growers must plant within their proportionate shares, when restrictive shares are in effect, pay field workers in full for work performed at rates not less than those determined by Secretary of Agriculture to be fair and reasonable, and must not employ children under the age of 14 or permit children between 14 and 16 years of age to be employed for or permitted to work for more than 8 hours a day.

The payment rate is the basic 0.8 cents per pound of sugar commercially recoverable, raw value, \$16.00 per ton on the first 350 short tons. This rate is reduced on successive steps to a minimum of 0.3 cents per pound on production over 30,000 tons.

The program also gives benefits to growers in the form of special conditional payments for crop deficiency or abandonment caused by drought, flood, storm, freeze, disease, or insects.

Payments to producers are financed out of the general funds of the Treasury. However, sugar taxes (an excise tax of one-half cent per pound, raw value, on all sugar marketed within the quota system) provide funds for the Treasury which more than offset all costs of this program.

Proportionate shares, when in effect, and payments to growers are made by ASC County Committees.

The following tables present the data relative to participation, production and payments in the 1970 Sugar Beet Program.

## CROPLAND ADJUSTMENT PROGRAM

The Food and Agriculture Act of 1965 authorized a new long-term Cropland Adjustment Program. It is a voluntary program designed to help farmers producing crops in surplus supply to enter into long-term agreements.

Farmers participating remove cropland from production for periods of from five to ten years. The diverted cropland is put to conservation, recreational, and open space uses. The program also emphasizes assistance to farmers, who, because of age, off-farm employment, or other personal adjustment reasons, desire to reduce their farming operations.

Accepted agreements are paid at a rate determined by the crop diverted and in productivity of that crop on the farm. Cost-sharing for carrying out needed conservation uses is allowed at approximately 50 percent of the cost.

Under Greenspan provisions, the program offers local, State and other governmental agencies assistance in acquiring cropland and establishing practices to meet their open space needs.

Ninety CAP contracts were approved in the State. Annual adjustment payments for 1970 amounted to \$122,755.

Producers could enter into contracts during the sign-up period held in 1966 and 1967.

1970 VOLUNTARY WHEAT PROGRAM

The objectives of the 1970 Wheat Program were to strengthen the farm price for wheat and to continue the effort to bring wheat production into line with needs. This was the last year under the Agricultural Act of 1965, which included the years 1966 through 1970.

The wheat allotment for 1970 was set Nationally at 45,500,000 acres. In the State of Washington the wheat allotment for 1970 was 1,541,145 acres compared to 1,799,601 acres for 1969. The minimum diversion was 30.3 percent of the 1970 allotment.

Barley was included as a feed grain in 1970 and substitution was permitted on the feed grain (barley, corn and grain sorghum) acres and oat-rye acres.

The certificate payment was \$1.57 per bushel, which was calculated on the difference between parity on July 1, 1970 and the National price support loan rate of \$1.25 ( $\$2.82 - \$1.25 = \$1.57$ ).

Producers were paid certificate payments on the basis of 48% of the farm allotment times the projected yield times \$1.57 . These payments amounted to \$48,594,349 on 720,825 acres.

The acreage diverted from wheat was 484,647 under the 1970 Program, of which 457,637 acres were diverted with no payment and the other 27,010 acres were diverted with payments amounting to \$855,402.

1970 FEED GRAIN PROGRAM

This Program assisted farmers to maintain their income from corn, grain sorghums and barley for which temporary cuts are desirable because of carry-over stock in storage. Barley was again included as a feed grain in 1970.

Minimum diversion was 20% of the feed grain base and a producer who had a base in excess of 25 acres could divert 50% of the base and receive payment for the diversion in excess of the minimum. A producer with 25 acres or less could divert all the base and could receive payment for minimum and maximum diversion. Payment for maximum diversion was reduced to 40% of the county price support rate from 45% and a maximum was placed on payment rates for additional diversion, which were corn - 60¢ per bushel, sorghum - 55¢ per bushel, and barley - 45¢ per bushel.

A price support payment, comparable to the wheat certificate payment, was made to producers who had harvested acres of feed grains (actual number of acres up to 50% of the feed grain base times the projected yield times 30¢ per bushel for corn, 20¢ per bushel for barley, and 29.69¢ per bushel for sorghum). Price support payments amounted to \$262,475.

There were a total of 126,473 acres diverted under the 1970 Feed Grain Program, of which 109,717 acres were diverted with no payment and 16,756 acres were diverted with payments amounting to \$340,364.

## COMPLIANCE

Compliance operations encompass all programs administered by ASCS. Compliance is a term used to designate that part of operations to develop facts and figures for use by county committees in determining a producer's eligibility to share in program benefits.

Compliance training goals are established to improve all phases of compliance operations and service to program participants. For the 1970 Compliance season, two months of comprehensive Compliance training, prior to and during the Compliance season was conducted by State Compliance personnel.

Ninety-three (93) county field personnel and all county office employees working on Compliance were provided Compliance training. These sessions were held in addition to individual employee training provided by county committees.

Measurement services were provided on an "actual cost" basis to producers requesting acreage or bin measurements. Producers participating in programs having acreage limitations are furnished services on a "guaranteed basis," provided they stay within the staked areas and comply with other program requirements. Measurement services were performed on approximately 3,700 farms during 1970.

After producer certification of program or crop acreages, farms are picked at random for spot-checking. These farms are visited and acreages measured. Accuracy of certifications is determined by comparing measured acreage with that certified by the farm operator. Approximately 5,000 spot checks were performed in 1970 to determine various program compliance.

## AGRICULTURAL CONSERVATION PROGRAM

Conservation - man's effort to use the resources of his environment to satisfy his needs without spoiling its capability to go on satisfying those needs. Conservation concerns everyone and is everyone's responsibility.

Among our goals for a more beautiful productive America, are fertile stable soils that resist erosion; develop stands of healthy trees for beautification; bountiful harvest of forestry products and protection of soil, and water resources; dispose of excess water with the least harm to our soils; store scarce water for many farm uses; prevent pollution of our streams, lakes, rivers, and other bodies of water and provide habitat and food for wildlife. The Agricultural Conservation Program is designed to aide in the attainment of these goals.

While the farmer or rancher bears the primary responsibility for conservation of the land, the public seeks to assure itself that the nations natural resources will be available for productive use for future generations. That is why Congress has consistently determined that a portion of the cost of conservation practices shall be assumed by the general public.

Significant progress has been made in natural resource conservation in the past 35 years, however, a great deal remains to be done. The ACP offers a wide range of conservation, soil, water, woodland, wildlife and pollution abatement practices to meet varied conservation problems. The following state summary contains data on participation, practice performance and Federal cost sharing during the 1970 program year.

ACP

Pruning and Thinning Practice

## PRACTICE F-4 EMERGENCY CONSERVATION MEASURES

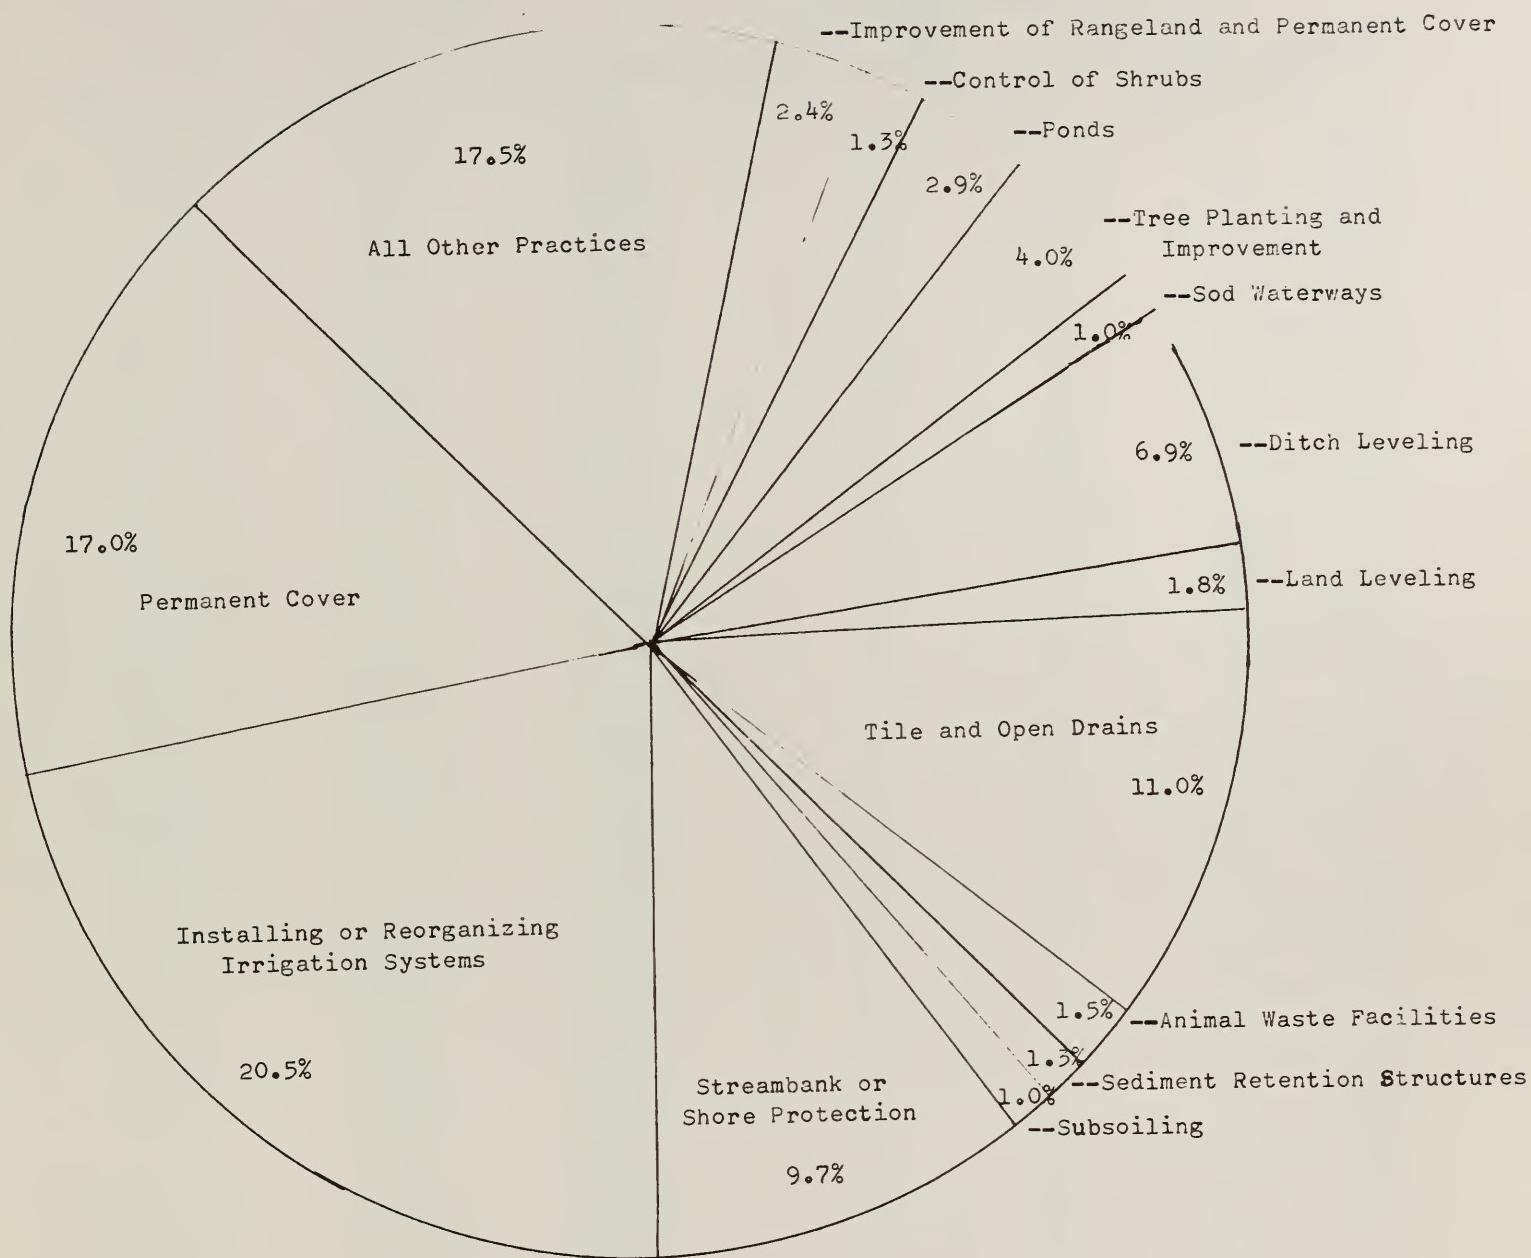

Damaged fruit and nut trees in Klickitat and Skamania Counties caused by severe ice storm January, 1970.

County	Farms	Acre Served	Cost-Share Earned
Klickitat	24	1,049	20,274
Skamania	17	395	10,287
<u>totals</u>	<u>41</u>	<u>1,444</u>	<u>30,561</u>

Public Law 85-58 provides cost-share payments to farmers who perform Emergency Conservation Measures to control erosion on farm lands or to rehabilitate farm lands damaged by wind erosion, floods, hurricanes, or other natural disasters.

1/ Includes agency's share of fringe benefits, county expenses paid by State office, but excludes occupancy agreement reimbursements.

2/ Includes one CED trainee.

3/ Includes one CED trainee and one CPOS trainee.

ADMINISTRATIVE OPERATIONS - 1970

Washington's 39 counties are divided into 270 local administrative districts (communities). Producers in each community elect a community committee of three who, in turn, elect a county committee of three producers to administer the various, direct action, programs in their county. To assist them in this function, 33 county offices are maintained, each supervised by a county executive director. In six instances, one office functions for two county committees. These offices are staffed by 81 full-time employees, in addition to the executive directors. They also utilize part-time help during the busy summer season, primarily to measure land for compliance purposes.

Disbursements during 1970 by these offices, to some 25,038 program participants, amounted to \$56,979,121. In addition, administrative expense for that period amounted to \$1,522,838.

In our constant search for greater administrative efficiency, much of the routine work in these offices is being automated. This has enabled us to process a substantially greater workload with fewer employee man-days. Our constant goal is striving for better service to farmers at a lower cost.
